

SANIL D TISON

IT MANAGEMENT LEADERSHIP PORTFOLIO

Executive Resume | Executive Biography | Leadership Philosophy | Accomplishments | IT
Management Expertise | 90-Day Framework | Credentials

CANDIDATE POSITIONING

Founder and Manager of TAIG IT Solutions with a long foundation in Navy leadership, enterprise infrastructure, security, cloud, and engineering. Seeking to bring that combined management and technical experience into a dedicated IT management role.

ADVANCE THE TRUTH TILL MISSION COMPLETION

Jacksonville, Florida | 904-916-1460 | saniltison@gmail.com

Portfolio: sanil-tison-portfolio.replit.app | GitHub: github.com/the-ai-guy-2k | Docker Hub: hub.docker.com/u/taig2k

Working Draft V3 - concise leadership-portfolio structure. Open metrics and conflicting historical dates remain marked for evidence harvest rather than guessed.

1. Executive Resume

TECHNOLOGY & OPERATIONS LEADER

IT Operations | Infrastructure Leadership | Service Delivery | Technical Program Leadership

Founder and Manager with more than two decades across Navy technology operations, enterprise infrastructure, security, cloud, automation, consulting, and client delivery. Combines direct management responsibility at TAIG IT Solutions with deep engineering experience and a mission-focused approach to people, technology, resources, risk, and execution.

Founder & Manager | TAIG IT Solutions | Jacksonville, FL | Current

- Founded and manage a technology-services organization covering IT solutions, AI-assisted operations, consulting, service development, client management, and business initiatives.
- Set priorities, shape services, translate client needs into executable work, and own delivery outcomes.
- Coordinate specialists, contributors, clients, and external providers while keeping responsibility and authority clear.
- Manage discovery, requirements, solution planning, stakeholder communication, provider evaluation, and resource decisions.
- Developed and operate Nebula, an AI-assisted governance and execution system used for analysis, planning, validation, documentation, and knowledge preservation.

Selected Management Work | The Jay Garrett Band

- Translate artist and release objectives into structured operational work.
- Coordinate dependencies across the artist, audio professionals, producers, distributors, promoters, venues, radio/media contacts, musicians, and providers.
- Track readiness, decisions, unresolved dependencies, outreach, and next actions while preserving artist and specialist authority.

Engineering Foundation

Enterprise network, security, cloud, automation, and infrastructure engineering across healthcare, defense, distributed enterprise, and AWS environments. Technical experience includes Cisco ACI/Nexus, routing and switching, OSPF/BGP, SD-WAN, VPN/firewalls, AWS, Terraform, Linux, VMware, Python, Ansible, GitHub Actions, Docker, Git, and CI/CD.

Career Snapshot

AWS Security Engineer | Jul 2023 - Oct 2024 - Cloud security review, configuration assessment, risk analysis, and stakeholder communication.

Network & Security Engineer | Brooks Rehabilitation Hospital | Mar 2023 - Jul 2023 - Enterprise networking, security, wireless, AWS, segmentation, and automation in healthcare.

Network Administrator / Engineer | American Tower | 2021 - 2022 [DATE VALIDATION OPEN] - Distributed enterprise infrastructure across five data centers and 50+ offices; Cisco ACI and automation.

Network Engineer IV | AUSGAR | 2018 - 2020 [DATE VALIDATION OPEN] - Defense R&D networking, security, Linux, automation, integration, testing, and validation.

U.S. Navy | Technology & Operational Leadership | 2002 - 2016 - Mission-critical technology, personnel leadership, mentoring, task assignment, accountability, planning, continuity, and coordination.

Certifications: CCNP Enterprise | CCNA Security | CompTIA Security+ | CompTIA Network+

2. Executive Biography

Sanil D Tison's path to IT management did not begin with a management title. It began in environments where technology, people, and mission were inseparable.

He entered the U.S. Navy in 2002 and spent roughly fourteen years in mission-critical technology work. The lesson was larger than the equipment: systems had owners, people had responsibilities, failures had consequences, and the mission still had to move. Leadership, accountability, planning, continuity, and technical judgment developed alongside engineering skill.

In civilian engineering, Tison carried that discipline into healthcare, defense research, distributed enterprise infrastructure, security, cloud, and automation. Those roles exposed him to the realities IT managers inherit every day - operational risk, technical debt, dependencies, change, outages, specialist knowledge, and competing priorities.

TAIG IT Solutions changed the level of responsibility. As Founder and Manager, Tison became accountable for more than the technical answer. He had to decide what mattered, understand client intent, shape services, coordinate people and providers, manage relationships, set priorities, and own outcomes.

That is the basis of his move into dedicated IT management. Engineering remains an advantage, not the destination. It gives Tison the technical credibility to understand the environment; management experience gives him the foundation to lead the people, resources, decisions, and operations around it.

The proposition is straightforward: put an experienced manager with deep engineering judgment in responsibility for an IT operation, and evaluate him by whether the organization becomes clearer, more reliable, better aligned, and better able to accomplish its mission.

3. Leadership Philosophy

ADVANCE THE TRUTH TILL MISSION COMPLETION

Establish Intent

Know what the organization is trying to accomplish and what success actually means.

Establish Current Truth

Understand the real state: people, systems, resources, risks, constraints, dependencies, evidence, and unresolved work.

Advance the Truth

Make decisions, assign work, execute, validate, update the picture, and continue until the intended outcome becomes reality.

Plans can change when reality changes. Responsibility does not. Tison's management approach is built around keeping decisions tied to evidence and keeping activity tied to mission.

People Leadership

Set clear ownership. Delegate at the right level. Give specialists room to exercise their discipline. Make priorities visible. Surface risk early. Develop people. Hold the team - and management - accountable for outcomes, not theater.

Decision Standard

What are we trying to accomplish? What is true now? What is blocking us? Who owns the next action? What evidence will tell us it worked?

4. Selected Leadership Accomplishments / Case Studies

TAIG IT Solutions | Founder & Manager

Context: Built and manage a technology-services organization rather than operating only as an individual engineer.

Leadership: Own priorities, client discovery, service design, solution planning, coordination, provider evaluation, delivery, and follow-through.

Evidence: Direct management evidence is established; team size, spend authority, and additional measurable outcomes remain to be harvested.

The Jay Garrett Band | Cross-Functional Operations

Context: A creative business objective required coordination across people with very different responsibilities and authority.

Leadership: Converted broad artist goals into release dependencies, owners, readiness checks, outreach work, provider decisions, and next actions.

Evidence: Demonstrates management across specialists without confusing management authority with creative or technical discipline authority.

Enterprise Engineering | Operational Judgment

Context: Worked across healthcare, defense, enterprise networking, cloud security, and automation where technical changes affected live operations.

Leadership: Applied troubleshooting, change execution, risk awareness, testing, validation, and continuity thinking across complex environments.

Evidence: Provides the technical judgment to manage engineers and infrastructure without needing to personally own every specialist task.

U.S. Navy | Mission & People Leadership

Context: Worked for approximately fourteen years in mission-critical technology environments with increasing operational and personnel responsibility.

Leadership: Led, mentored, assigned work, coordinated activity, maintained accountability, and operated within disciplined mission structures.

Evidence: Team counts, mission scale, and strongest leadership episodes remain targeted evidence-harvest items.

5. IT Management Expertise

Tison organizes the IT Manager's responsibility into three connected domains.

PEOPLE	TECHNOLOGY & OPERATIONS	RESOURCES & BUSINESS
Staffing	Infrastructure	Budget
Assignments	Applications & services	Vendors & contracts
Development	Security	Priorities
Accountability	Reliability	Planning
Communication	Support & incidents	Risk & continuity
Specialist coordination	Lifecycle	Business requirements
	Projects & improvement	Leadership communication

Resource Lens

People | Technology | Services | Projects & Change | Risk & Continuity

A technical need becomes a management decision when cost, lifecycle, business impact, risk, timing, ownership, and competing priorities are added to the equation.

Operational Focus

Reliable services. Useful security. Clear ownership. Controlled change. Incident recovery. Root-cause improvement. Lifecycle visibility. Shared knowledge. Measured improvement.

6. 30 / 60 / 90-Day Leadership Framework

Days 1-30 | Understand

Meet the team and business stakeholders. Map critical services, systems, providers, projects, known risks, budget commitments, pain points, and unresolved work. Establish Current Truth before prescribing major change.

Days 31-60 | Prioritize & Stabilize

Validate the highest operational, security, people, lifecycle, and continuity risks. Clarify ownership and escalation. Stabilize material issues. Align the first improvement priorities with leadership.

Days 61-90 | Execute & Improve

Begin approved improvements with clear ownership and validation. Establish useful operating rhythms for people, services, risk, resources, and projects. Publish an updated Current Truth and a realistic forward plan.

This is a method for entering an organization, not a prewritten diagnosis of one. The real plan begins after the environment is understood.

7. Credentials & Supporting Evidence

Certifications

CCNP Enterprise | CCNA Security | CompTIA Security+ | CompTIA Network+

Selected Technical Evidence

- TAIG Service Portal (TSP) - source control, CI/CD, containerization, infrastructure provisioning, image publishing, deployment, and production validation.
- PSIS / Diamond IQ - pitcher-centric intelligence system developed through structured application, deployment, documentation, and iterative validation.
- Nebula - AI-assisted engineering and governance system centered on context, scope, decisions, execution, validation, and engineering truth.

Evidence Still Being Harvested

- Largest teams directly supervised, indirectly led, mentored, or coordinated.
- Budget, purchasing, vendor-spend, contract, and resource authority actually exercised.
- Strongest quantified examples of operational improvement, transformation, incident response, risk reduction, and cost/value decisions.
- Final validation of conflicting historical employment dates before publication.

Portfolio rule: narrative quality never outruns truth. Stronger claims enter the package only when the underlying experience supports them.
